Book Reviews

BIOLOGICAL ASPECTS OF THE TRANSMISSION OF DISEASE.

This book is the work of many distinguished authors, each contributing an article in his own particular field. It is edited by C. Horton-Smith.

The subject matter is extensive since it covers the biological field generally. Thus articles deal with diseases of animals and also plants. This is an asset in that a more extensive and broader view of the whole biological field is obtained. The work is highly recommended.

Biological Aspects of the Transmission of Disease — Edited by C. Horton-Smith, may be obtained in Canada from Clarke, Irwin & Co., Ltd., Toronto, Ontario. Price — \$4.75.

STATISTICAL TABLES FOR BIOLOGICAL, AGRICULTURAL AND MEDICAL RESEARCH

by Sir Ronald A. Fisher and Frank Yates

Statistical treatment of data has now become a requirement in practically all fields of research. The work under review is a new edition of a standard volume which is to be found in the majority of laboratories.

There can be no doubt about its value to the mathematician but it is doubtful if the majority of workers in the biological field are sufficiently trained in mathematics to use the work intelligently.

Statistical Tables for Biological, Agricultural and Medical Research — (5th Edition). May be obtained in Canada from Clarke, Irwin & Co., Ltd., Toronto, Ontario. Price — \$5.35.
